

□

Recently, we have started a new line of research where we are developing web infrastructure for reasoning. Currently, DeLP has been wrapped as a Web Service and a Visualization Web Service has been implemented to provide a more useful interaction with the dialectical trees that are the result of the argumentation process necessary to answer queries. A preliminary beta version of these services can be found in [http://lidia.cs.uns.edu.ar/ws\\_delp/](http://lidia.cs.uns.edu.ar/ws_delp/).

Argument-Based Critics and Recommenders: A Qualitative Perspective on User Support Systems C. I. Chesñevar, A. G. Maguitman, G. R. Simari, Journal of Data and Knowledge Engineering (in Press).

Incorporating Defeasible Knowledge and Argumentative Reasoning in Web-Based Forms Sergio A. Gómez, Carlos I. Chesñevar, Guillermo R. Simari Proc. of the 3rd Intl. Workshop on Intelligent Techniques for Web Personalization, (ITWP 2005), IJCAI 2005.

Knowledge Distribution in Large Organizations Using Defeasible Logic Programming. C. I. Chesñevar, R. Brena and J. Aguirre, 18th Canadian Conference on AI LNCS 3501, 2005, pp. 244-256.
